Tollot

are crafted by hand. Tips are fabricated individually by highly skilled precision technicians. Each instrument is continually held to strict quality controls during each stage of manufacturing, with tapering point working end. Well suitable for inter-dental cavities.

DIAGNOSTIC

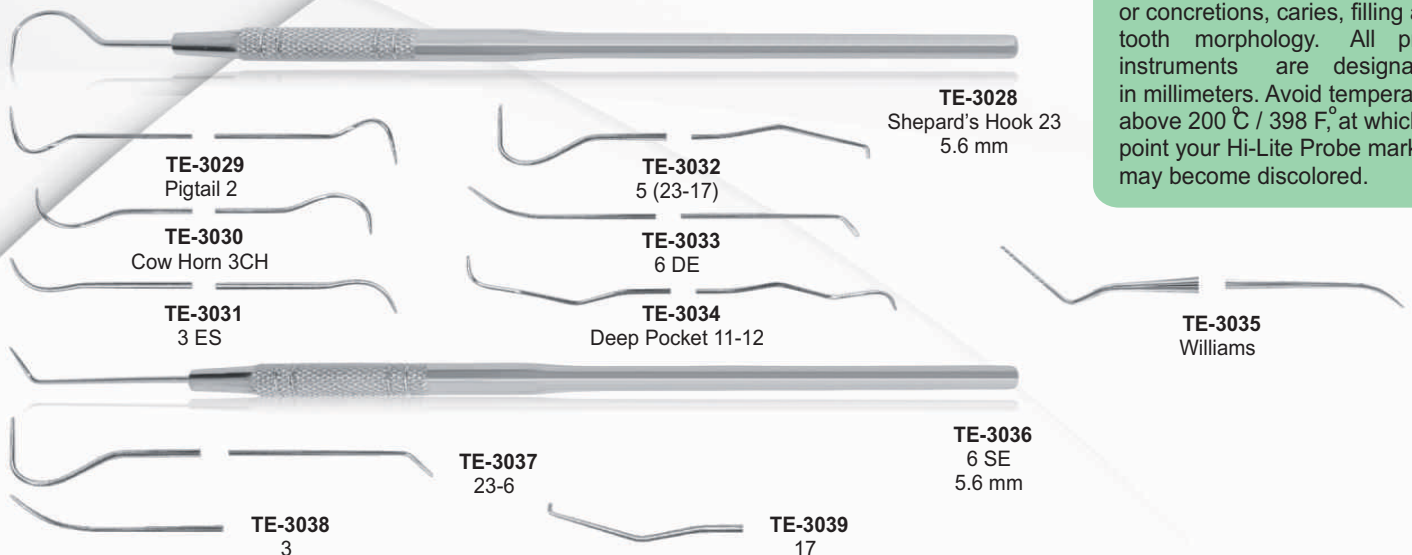

PROBES

Available with/without colour marking

Probes are precision fabricated to provide accuracy for intraoral gauging. Probes with extra fine, sharp points for diagnosing tartar or concretions, caries, filling and tooth morphology. All probe instruments are designated in millimeters. Avoid temperature above 200 °C / 398 F°, at which point your Hi-Lite Probe markings may become discolored.
